

GlusterFS: Changing bricks without downtime or dataloss

140139

November 4, 2014

Abstract

From Landes [?]: The abstract is of utmost importance, for it is read by 10 to 500 times more people than hear or read the entire article. It should not be a mere recital of the subjects covered. Expressions such as "is discussed" and "is described" should never be included! The abstract should be a condensation and concentration of the essential information in the paper.

1 Introduction

2 SLA/RECSPEC

Please state why you are doing this project. Who will benefit from it? What can the users expect in terms of stability and performance? What can be measured so this can be a real "Service Level Agreement"? Think carefully about this in the beginning of the project, imagine you are doing this to make money. To send an invoice (faktura) after project completion you have to explain to the customer that the project has now been completed according to what we agreed on when the project began. In other words, make sure you are not "just doing this for fun".
